The 130HW shown on the quick change carriage system for below ground level operation.
The machine is held on to the carriage with two pins and can be removed or set in place in less than 30 seconds.

At only 7 feet long, 12 inches wide and under 50 lbs. the quick change carriage system is the perfect companion to our handheld machines.
It adds versatility to the machine's capabilities and helps reduce operator fatigue on longer bores.

STRONG • RELIABLE • AFFORDABLE

IMPACT ON YOUR BUSINESS: The most economical and versatile boring machine on the market today!

The handheld "Prairie Dog" Models 130HW and 200WW allow a single operator to bore holes from 2 to 6 inches in diameter, in lengths of 75 feet and longer. Its compact design makes it easy to use in even the smallest workspaces. The versatility of the "Prairie Dog" machines enables you to operate either above or below the ground utilizing standard piping or our exclusive quick thread drill rod. The "Prairie Dog" is designed to be inexpensive to operate and requires little maintenance.

Below ground operation of the handheld machines can be simplified even further with the use of our new QuickAttach Rail System. Weighing in at under 50 lbs. this attachment can help the operator keep aligned and reduce fatigue on longer bores.

Prairie Dog Boring Equipment manufactures a complete line of boring machines for any size irrigation job, above or below ground level, in any soil conditions.

The Model 500RTW can be used just as effectively in above ground level or below ground level applications.
